

QUAI Release 2- Multiple Product Request User Instruction Guide

Standard Operating Instruction for testing multiple product request feature in QUAI

Document Type	User Instruction / Standard Testing Support Guide
Feature	Multiple Product Request
Prepared For	Application Users / Testers
Version	1.0

1. Purpose

This guide provides standardized instructions for using the Multiple Product Request feature in the application. The feature allows users to request information for multiple products at once by downloading an Excel template, entering product identifiers, uploading the completed file, running AI-Filling, and exporting the completed result in Excel format.

2. Scope

This instruction applies to users who need to request, populate, review, and export product information for multiple products through the application.

3. Expected Outcome

- Download and complete the product request template.
- Upload the completed Excel template to the application.
- Use AI-Filling to automatically populate the remaining product information.
- Review the generated product data before export.
- Download the final report in XLSX format.

4. Prerequisites

- Access to the application URL.
- Permission to use the Multiple Product Request feature.
- Valid product identifiers, such as Sales Name, SP Number, or OPN. If you do not have a testing example, refer to the sample template files available in the shared link below:
[https://ishare.ap.infineon.com/sites/QMAgents/Shared%20Documents/Multiple%20Product%20Request/test samples](https://ishare.ap.infineon.com/sites/QMAgents/Shared%20Documents/Multiple%20Product%20Request/test%20samples)

5. Important Rules

- Only populate the Product Name column in the downloaded template.
- Do not modify, rename, delete, or reorder other columns in the template.

6. Procedure

6.1 Open the Application

Actions:

1. Go to the application URL.
2. Under Topics, select Multiple Product Request.

Expected result: The Multiple Product Request page is displayed.

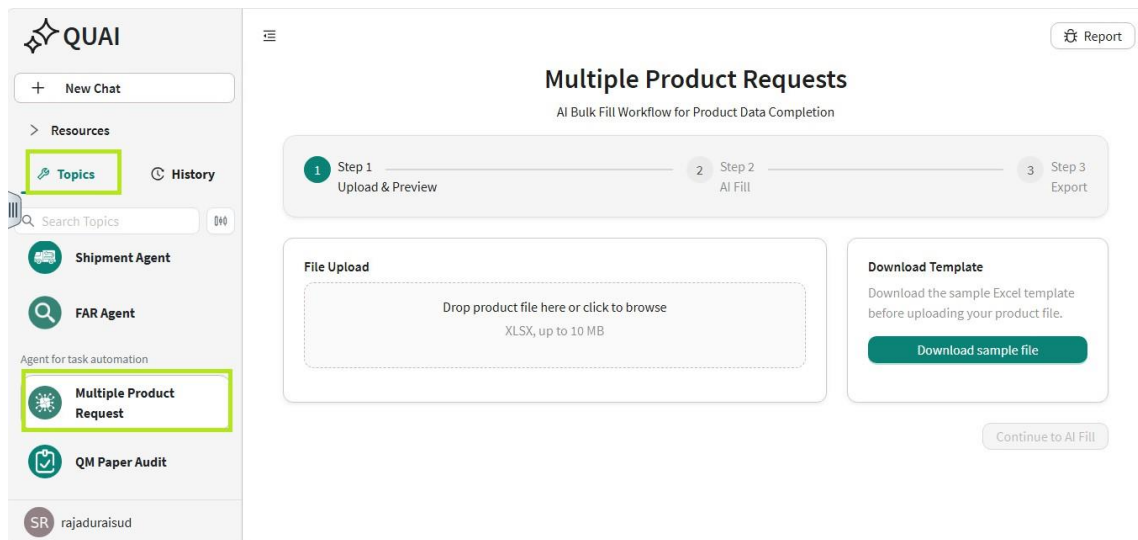

Figure 1: Multiple Product Request entry point

6.2 Open the Download Template Card

Actions:

3. On the right side of the screen, locate the Download Template card.
4. Click Download File.

Expected result: The template download options are displayed.

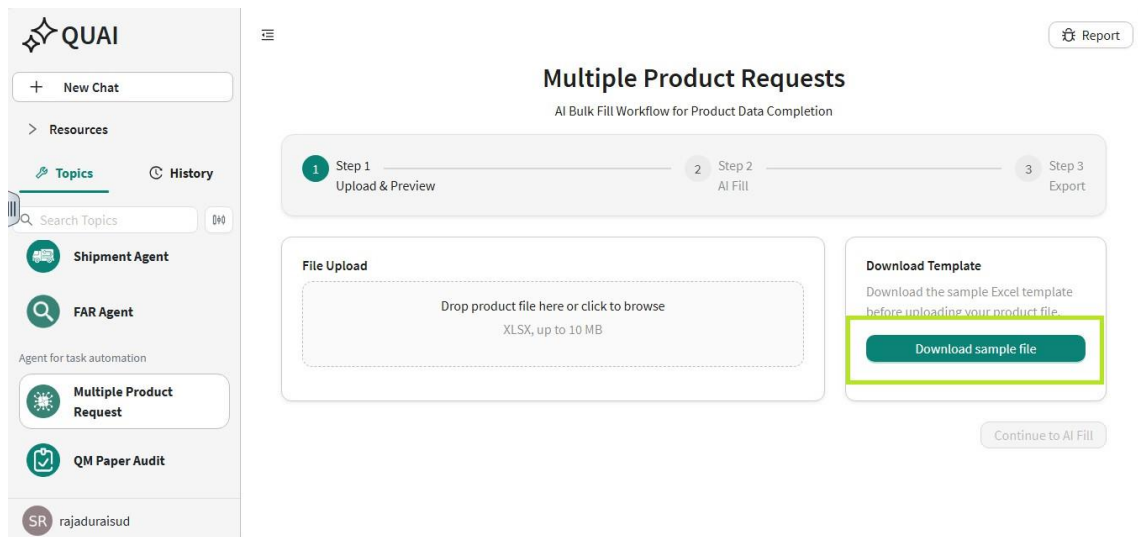

Figure 2: Download Template card

6.3 Choose the Template Type

Actions:

5. Select Standard Template if all columns are required.
6. Select Custom Template if only selected columns are required.
7. Click Download Template.

Expected result: An Excel template is downloaded to your device.

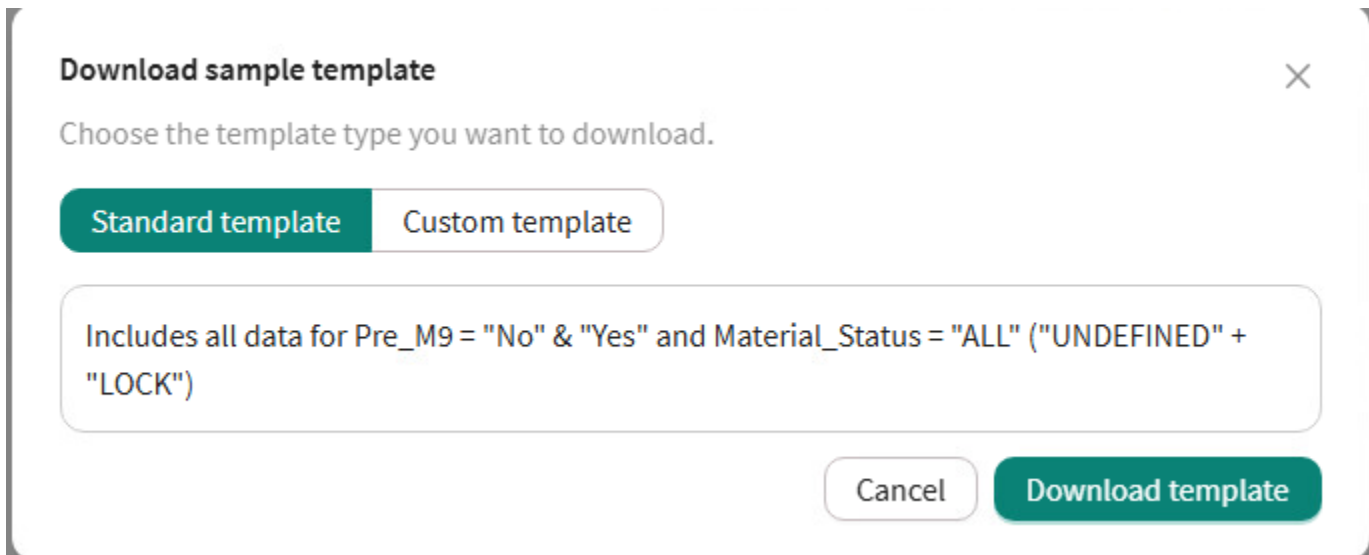

Figure 3: Template type selection

6.4 Configure a Custom Template, if Required

Actions:

8. For Custom Template, select the required columns.
9. Proceed with downloading the customized Excel template.

Expected result: The downloaded template contains the selected columns.

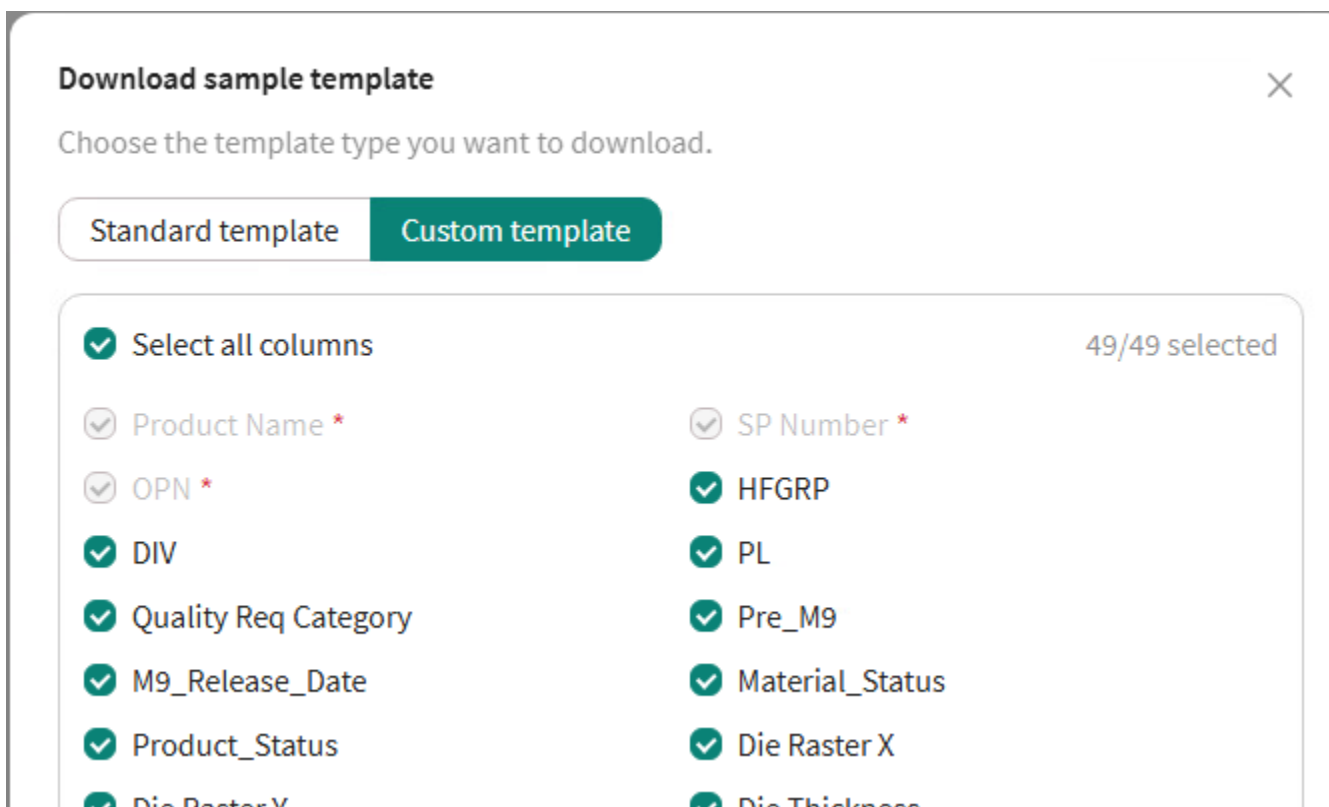

Figure 4: Custom template column selection

6.5 Complete the Product Name Column

Actions:

10. Open the downloaded Excel file.
11. Enter the corresponding value in the appropriate column for the Product Name, SP number, or OPN

Product Name	SP Number	OPN	HFGRP	DIV	PL
EDI3025AS					
	SP006073951				
		AIMCE120R011M2P1AXQMA1			
	SP006060533				
DA21560					
	SP001129584				
	SP001612750				
		TLE63892GVXUMA2			
		FP15R12KE3BOMA1			
		CG9022AM			
		CY7C4121KV13-633FCXI			

Figure 5: Product Name column in Excel template

- 12 Do not update any other column.
- 13 Save the file.

Expected result: The completed template is saved and ready for upload

6.6 Upload the Completed Template

Actions:

1. Return to the application.
2. Use the File Upload option to upload the saved Excel file.

Expected result: The file uploads successfully without validation errors.

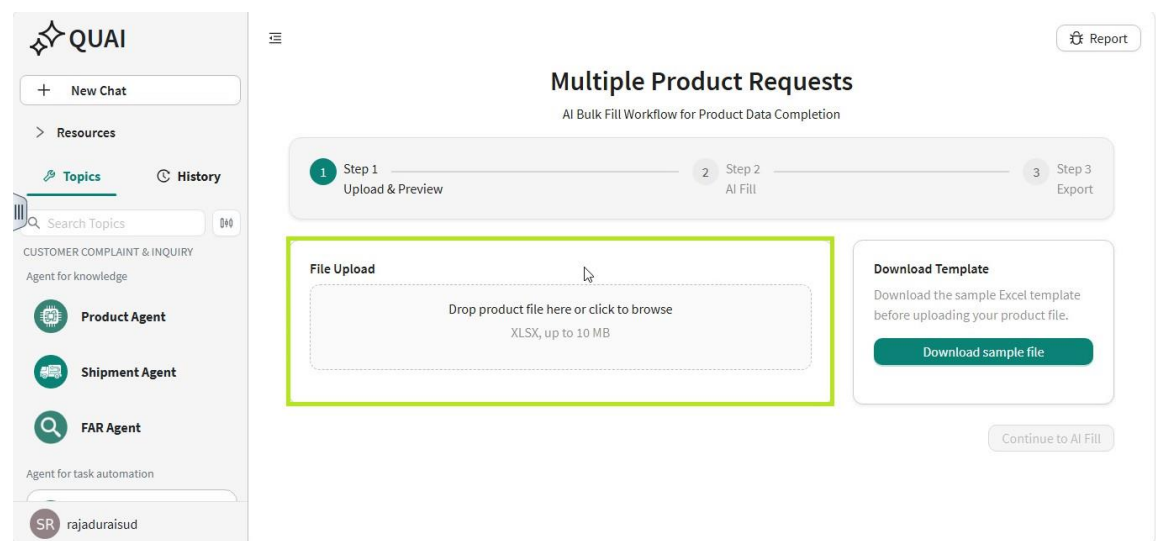

Figure 6: File Upload option

6.7 Preview Uploaded Data

Actions:

3. Confirm that the product names are displayed correctly

#	Product Name	SP Number	OPN	HFGRP	DIV	PL	Quality Req Category	Pre.
1	1EDI3025AS	- empty -	- empty -	- empty -	- empty -	- empty -	- empty -	- em
2	- empty -	SP006073951	- empty -	- empty -	- empty -	- empty -	- empty -	- em
3	- empty -	- empty -	AIMCE120R011M2P1AXQMA1	- empty -	- empty -	- empty -	- empty -	- em
4	- empty -	SP006060533	- empty -	- empty -	- empty -	- empty -	- empty -	- em

6.8 Additional Parameter

< 1 >

Default Logic: All data retrieval is based on "Pre_M9 = No" (QA-Milestone = M9 and above) and "Material_Status" = UNDEFINED
If no data found, retrieves all SP# with different "Product = QA-milestone value" eg. "Product = Mx"

☐ Include all data for Pre_M9 = "No" & "Yes" and Material_Status = "ALL" ("UNDEFINED" + "LOCK")

Figure 8: Optional Parameter

6.8.1 Standard Template : Parameter is Disabled

6.8.2 Custom Template : Parameter is Enabled

1. **Checkbox Not Selected:** Pre_m9 = No and Material_status = UNDEFINED
2. **Checkbox Selected:** Pre_m9 = Yes and No and Material_status = UNDEFINED and LOCK

6.9 Run AI-Filling

Actions:

4. Click Continue to AI-Filling.
5. Wait for the application to populate the remaining product information.

Expected result: AI-Filling completes and product data is populated automatically.

Default Logic: All data retrieval is based on "Pre_M9 = No" (QA-Milestone = M9 and above) and "Material_Status" = UNDEFINED
If no data found, retrieves all SP# with different "Product = QA-milestone value" eg. "Product = Mx"

☐ Include all data for Pre_M9 = "No" & "Yes" and Material_Status = "ALL" ("UNDEFINED" + "LOCK")

Continue to AI Fill
